# POSI-CLOSE

PLANTER WHEELS

## OUR BEST SELLERS!

Posi-Close Planter Wheels aggressively destroy the seed trench, creating excellent seed-to-soil contact for better seedling emergence and crop stand.

When using traditional rubber wheels in wet soil, the seed trench will crust and bake, or simply open back up. You'll also commonly run into issues with smearing and extreme compaction.

Our wheels, on the other hand, prevent crusting and baking by leaving a soft mulch on top of the seedbed. And there's no need to worry about the seed trench opening back up, either. With their patented "horizontal rod" design and wide ground path, Posi-Close Planter Wheels literally destroy

## CLOSE EVEN THE MOST

STUBBORN SEED TRENCHES

OUR WHEELS CREATE EXCELLENT  
SEED-TO-SOIL  
CONTACT  
FOR BETTER EMERGENCE AND  
CROP STAND

the seed trench and virtually eliminate any chance of smearing or extreme compaction.

Good soil contact with the seed kernel is one of the most important aspects of obtaining uniform emergence. Our wheels effectively firm the soil around the seed, creating excellent seed-to-soil contact and notably improving emergence.

Regardless the type of soil, the type or terrain, or even the planting situation, our wheels excel at fully closing the seed trench.

Normally, to ensure maximum closure, different practices (such as no-till, hilly terrain, or hard soil conditions) require different wheel configurations. Our wheels save you that step; they're designed to be adjustable for width, giving you a greater ability to close even the most stubborn seed trenches.
