

360 YIELD SAVER®

DON'T LET YIELD FALL THROUGH THE CRACKS

360 YIELD SAVER® cuts header loss up to 85%. Poly blocks and intermeshing bristles reduce loss two ways: by cushioning the ear's impact - reducing butt shelling - and by capturing kernels.

Save more of what you grow.

REDUCE HEADER LOSS BY 80%

Increase ROI with 360 YIELD SAVER, which, in side-by-side tests, was shown to save up to 85% of header loss. At this rate of savings, 360 YIELD SAVER can pay for itself within the first season and generate more than a 75% ROI after three years of use. Consider the return on investment for a typical corn operation with two-bushel savings. With an eight-row head covering 1,200 acres per year, a grower could expect gross yield savings of over \$16,000, with a net profit of almost \$7,000.

100% RETURN ON INVESTMENT

2000 ACRES PER YEAR ON 12 ROW HEAD

\$28,380 NET PROFIT AFTER THREE YEARS // OVER 2X RETURN ON INVESTMENT

KEY FEATURES

- A** 360 YIELD SAVERs reduce header loss with a combination of cushion and capture. Bristle blocks provide a softer landing for ears which means less shelling. Kernels that do come off the cob, are captured by long-lasting bristles and delivered to the cross auger.
- B** A corn head is a harsh environment, but 360 YIELD SAVER is built to withstand the abuse. Even when brushes show some wear, they are still delivering stray kernels and nubbins to the cross auger. Average brush block life is 150 ares per row. Wear life of the chain is very similar to traditional gathering chains.
- C** 360 YIELD SAVER consists of a specialized gathering chain with crop lugs and replaceable brush blocks. Blocks quickly snap and screw into position and are easily replaced at the end of the harvest season.

CODY SLOAN // GORE, OKLAHOMA

"I'd estimate we lost on average between 3 and 5 bushels before we got the 360 YIELD SAVERs and now there's virtually no loss."
