# AQUAPRO

## The professional series

The Aquapro is an efficient and environmentally friendly thermal weed killer. It provides a turnkey solution for eliminating unwanted weeds, through its patented technology, that projects hot water at over 230° F / 110° C. The result is a radical thermal shock down the roots. Equipped with our intelligent Logic Control, it maintains a constant temperature during treatment. It's a single operator unit. It also performs as a cold or hot pressure washer with a 4000 PSI / 4 GPM performance.

### SPECIFICATIONS

Polyethylene tank of 200 or 535 gallons with low water level protection

2-inch filling inlet, garden hose, and fountain terminal
